Requirements:

- 1- Create table called users that satisfies the above form needs
(You must create and id to the table)
 - a. ID can be auto incremented
 - b. ID using myuid (Search)

- 2- When you click submit to the form, Data will be inserted into the table (Prepared statement, PDO)
- 3- Retrieve all the data inside the table and display it.

Bonus (1)

Use mysqli (procedural or oop) with database connection and queries.

Bonus (2)

- 1- Display the select result in a table.
- 2- Each record has 2 buttons edit, delete
- 3- If you click on the delete button the selected record only deleted
- 4- If you click on the update button you can edit the values of the selected.

Hint: You can use [header](#) function to move between pages when you press the buttons.

Good luck ^^
