(PHP)Day 3 lab

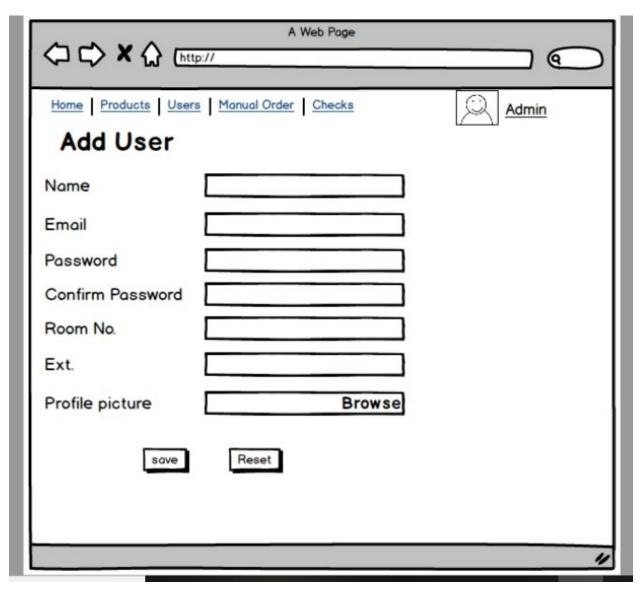

Requirements:

1- Implement the above form in php
2- Apply the validation on the email field on the php side using 2 ways
3- Room number should be a drop down that contains 'Application1, Application2 and cloud)

4- Upload a profile picture and ensure that is a photo
5- Save all info in the form in a file called userInfo file
6- Display the information from userInfo file
7- Use file_get_content and file_put_content while dealing with files

Bonus

1- Add validation on the password field to be only
   a. Only 8 chars
   b. Doesn't allow special chars -only underscore allowed-
   c. Doesn't accept Capital characters
2- When you found an error in the email or password redirect to a new page that displays the error you had and Don't submit the data into file
3- Well-formed code is bonus.

Good luck ^^
